## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bahr (US 2001/0017134) in view of Applicant's Admission of Prior art (see page 7, line 9 through page 11, line 1 of Applicant's remarks filed 11/21/06, see also MPEP 2129 I for information concerning the use of an Applicant's admission as prior art).

The Bahr reference discloses a respiratory device comprising a breathing gas tube 2 including a sensor means 28, a signal line 14 (see paragraph 0019) and a contact-type interface at the distal and proximal ends (6,8) between the signal line 14 and the sensor means 28, but does not disclose the interface as being a contactless-type (i.e. infrared or inductive in make-up). Applicant's Admission of prior art states that contactless interfaces (i.e. infrared or inductive) are well known in the electrical engineering arts (see page 7, line 9 through page 11, line 1 of Applicant's remarks filed 11/21/06). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to substitute a contactless-type interface as admitted by Applicant for the contact-type interface of Bahr, wherein so doing would amount to the mere substitution of one type of signal interface for another that would work or function equally as well in the Bahr device.

Art Unit: 3771

In regard to claims 11-17, the method as claimed would be inherent during normal use and operation of the combined device.

***Response to Arguments***
